LETTERPRESS

Check before you print.

US Letter calibration sheet

1. Print on US Letter at Actual size or 100%.
2. Turn off Fit, Shrink, and borderless expansion.
3. Measure the square and the line with a physical ruler.

1 inch

Measure from the center of one border to the other.
Both the width and height must equal exactly 1 inch.

5-inch cross-check

If the measurements are off, check your print dialog and printer driver.
Do not adjust the artwork size to compensate for a print scaling setting.
Once this test measures correctly, print your tiled PDF with the same settings.

This PDF uses 72 points per inch. Screen size is not a physical-size test.
